

Warehousing: the linchpin of your supply chain

smart logistics

Our warehouses have strategic – and hence attractive – locations.

Smart logistics involves ensuring that the heart of your supply chain – your inventory – is strategically placed to keep your logistics operation running like a well-oiled machine. Hitachi Transport System does this by taking an integral approach: our complete package of services connects your supply chain from beginning to end, with the warehouse at its heart.

Smart warehousing strategy

- Tailor-made solutions for any storage requirements
- [Supply chain design and optimisation](#): 'centre of gravity method'
- Optimal warehouse and distribution design
- Organising our warehouse in line with your products' specific requirements
- Hitachi Logistics Engineers suggesting ways in which your logistics operation could be further improved
- Automated inventory management and optimisation
- Inbound and outbound order processing
- Quality control
- In-house logistics possibilities
- Green logistics analysis and sustainable recommendations

Choice of the most suitable methods

- Barcode scanning
- Voice picking
- Pick lists

Integral approach to your warehouse operation

- Bonded and public storage of your goods
- Cross-docking
- [Value Added Services](#)
- Replenishment
- [Customs and tax services](#)
- [Transportation and carrier management](#)
- Domestic consolidation and multi-country consolidation
- Reverse logistics
- Platform business

Since your logistics efficiency depends on excellent transport links, our warehousing and distribution facilities are situated in strategic locations around the world.
